

Jukeboxes for DVD media

TERASTORE DVD L

The **TERASTORE DVD L** is a high-quality, compact and low-priced storing system based on DVD-RAM mediums. The fully equipped basic version disposes of 6 CD drives and 12 50-disc interchangeable magazines.

The integrated DVD-RAM drives allow using rewritable DVD-RAMs or other standard mediums like DVD-ROMs, DVD-Videos etc.

The single discs are loaded or unloaded through a mail slot or by the 50-disc interchangeable magazines. The menu-driven operation is uncomplicated. A display shows all relevant information.

An internal air filtration system prevents soiling of the discs.

The jukeboxes are equipped with one or several **LVD-SCSI-Interface(s)** (Low Voltage Differential), which controls the data transfer between server and drives. The SCSI-Interface also transmits the control commands to the robotics.

The additional serial interface makes a diagnostic mode for local use or remote dial-up possible.
